	Q1	Q2	Q3	Q4
<b>Number and Operations in Base Ten</b>				
<i>Grade 4 expectations in this domain are limited to whole numbers less than or equal to 1,000,000.</i>				
<b>4.NBT.A Generalize place value understanding for multi-digit whole numbers</b>				
<b>4.NBT.A.1</b> Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. <i>For example: Recognize that <math>700 \div 70 = 10</math> or <math>700 = 10 \times 70</math> by applying concepts of place value and division.</i>	•	•		
<b>4.NBT.A.2</b> <ul style="list-style-type: none"> <li>• Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form</li> <li>• Compare two multi-digit numbers based on meanings of the digits in each place, using symbols (<math>&gt;</math>, <math>=</math>, <math>&lt;</math>) to record the results of comparisons</li> </ul>	•			
<b>4.NBT.A.3</b> Use place value understanding to round multi-digit whole numbers to any place	•			
<b>4.NBT.B Use place value understanding and properties of operations to perform multi-digit arithmetic</b>				
<b>★ 4.NBT.B.4</b> Add and subtract multi-digit whole numbers with computational fluency using a standard algorithm	•	•	•	•
<i>Notes 4.NBT.B.4:</i> <ul style="list-style-type: none"> <li>• Computational fluency is defined as a student's ability to efficiently and accurately solve a problem with some degree of flexibility with their strategies.</li> <li>• A standard algorithm can be viewed as, but should not be limited to, the traditional recording system.</li> <li>• A standard algorithm denotes any valid base-ten strategy.</li> </ul>				
<b>★ 4.NBT.B.5</b> <ul style="list-style-type: none"> <li>• Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations</li> <li>• Illustrate and explain the calculation by using equations, rectangular arrays, and area models</li> </ul>	•	•	•	•
<i>Note: 4.NBT.B.5 Properties of operations need to be referenced</i>				
<b>★ 4.NBT.B.6</b> <ul style="list-style-type: none"> <li>• Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and the relationship between multiplication and division</li> <li>• Illustrate and explain the calculation by using equations, rectangular arrays, and area models</li> </ul>	•	•	•	•
<i>Note: 4.NBT.B.6 Properties of operations need to be referenced</i>

Q1	Q2	Q3	Q4
----	----	----	----

**Number and Operations - Fractions**

Grade 4 expectations in this domain are limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100.

**4.NF.A Extend understanding of fraction equivalence and ordering**

★ 4.NF.A.1

- By using visual fraction models, explain why a fraction  $a/b$  is equivalent to a fraction  $(n \times a)/(n \times b)$  with attention to how the number and size of the parts differ even though the two fractions themselves are the same size
- Use this principle to recognize and generate equivalent fractions.

For example:  $1/5$  is equivalent to  $(2 \times 1)/(2 \times 5)$ .

•	•	•	•
---	---	---	---

4.NF.A.2

- Compare two fractions with different numerators and different denominators (e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as  $1/2$ )
- Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols ( $>$ ,  $=$ ,  $<$ ), and justify the conclusions (e.g., by using a visual fraction model)

	•	•	
--	---	---	--

**4.NF.B Build fractions from unit fractions by applying and extending previous understanding of operations of whole numbers**

★ 4.NF.B.3

Understand a fraction  $a/b$  with  $a > 1$  as a sum of fractions  $1/b$  (e.g.,  $3/8 = 1/8 + 1/8 + 1/8$ ):

- Understand addition and subtraction of fractions as joining and separating parts referring to the same whole
- Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation and justify decompositions (e.g., by using a visual fraction model) (e.g.,  $3/8 = 1/8 + 1/8 + 1/8$ ;  $3/8 = 1/8 + 2/8$ ;  $2 \frac{1}{8} = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$ )
- Add and subtract mixed numbers with like denominators (e.g., by using properties of operations and the relationship between addition and subtraction and by replacing each number with an equivalent fraction)
- Solve word problems involving addition and subtraction of fractions referring to the same whole and having like denominators (e.g., by using visual fraction models and equations to represent the problem)

	•	•	•
--	---	---	---

Note: 4.NF.B.3 Converting a mixed number to an improper fraction should not be viewed as a separate technique to be learned by rote memorization, but simply a case of fraction addition (e.g.,  $7 \frac{1}{5} = 7 + 1/5 = 35/5 + 1/5 = 36/5$ ).

★ 4.NF.B.4 Apply and extend previous understandings of multiplication to multiply a fraction by a whole number:

- Understand a fraction  $a/b$  as a multiple of  $1/b$  [e.g., Use a visual fraction model to represent  $5/4$  as the product  $5 \times (1/4)$ , recording the conclusion by the equation  $5/4 = 5 \times (1/4)$ ]
- Understand a multiple of  $a/b$  as a multiple of  $1/b$ , and use this understanding to multiply a fraction by a whole number [e.g., Use a visual fraction model to express  $3 \times (2/5)$  as  $6 \times (1/5)$ , recognizing this product as  $6/5$  (In general,  $n \times (a/b) = (n \times a)/b$ )]
- Solve word problems involving multiplication of a fraction by a whole number (e.g., by using visual fraction models and equations to represent the problem)

For example: If each person at a party will eat  $3/8$  of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?

	•	•	•
--	---	---	---

Note: 4.NF.B.4 Emphasis should be placed on the relationship of how the unit fraction relates to the multiple of the fraction

Number and Operations – Fractions continued on next page...

## 4th GRADE MATHEMATICS YEAR LONG PACING

### Arkansas Mathematics Standards

	Q1	Q2	Q3	Q4
<b>Number and Operations – Fractions, continued</b>				
<i>Grade 4 expectations in this domain are limited to fractions with denominators 2, 3, 4, 5, 6, 8, 10, 12, and 100.</i>				
<b>4.NF.C Understand decimal notation for fractions and compare decimal fractions</b>				
<b>4.NF.C.5</b> Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. <i>For example: Express <math>\frac{3}{10}</math> as <math>\frac{30}{100}</math>, and add <math>\frac{3}{10} + \frac{4}{100} = \frac{34}{100}</math>.</i>		•	•	•
<i>Note: 4.NF.C.5 Students who can generate equivalent fractions can develop strategies for adding fractions with unlike denominators in general. However, addition and subtraction with unlike denominators in general is not a requirement at this grade.</i>				
<b>4.NF.C.6</b> Use decimal notation for fractions with denominators 10 or 100. <i>For example: Write 0.62 as <math>\frac{62}{100}</math>; describe a length as 0.62 meters; locate 0.62 on a number line diagram</i>			•	•
<b>4.NF.C.7</b> <ul style="list-style-type: none"> <li>• Compare two decimals to hundredths by reasoning about their size</li> <li>• Recognize that comparisons are valid only when the two decimals refer to the same whole</li> <li>• Record the results of comparisons using symbols (<math>&gt;</math>, <math>=</math>, <math>&lt;</math>), and justify the conclusions (e.g., by using a visual model)</li> </ul>			•	•

★ Big Idea/Concept Standard

• indicates standard for instruction each quarter

	Q1	Q2	Q3	Q4
<b>Geometry</b>				
<b>4.G.A Draw and identify lines and angles, and classify shapes by properties of their lines and angles</b>				
<b>4.G.A.1</b> <ul style="list-style-type: none"> <li>• Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines</li> <li>• Identify these in two-dimensional figures</li> </ul>	•		•	•
<b>★ 4.G.A.2</b> <ul style="list-style-type: none"> <li>• Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size</li> <li>• Recognize right triangles as a category and identify right triangles</li> </ul>	•	•	•	•
<i>Note 4.G.A.2: Trapezoids will be defined as a quadrilateral with at least one pair of opposite sides parallel, therefore all parallelograms are trapezoids</i>				
<b>4.G.A.3</b> <ul style="list-style-type: none"> <li>• Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts</li> <li>• Identify line-symmetric figures and draw lines of symmetry</li> </ul>			•	•

★ Big Idea/Concept Standard

4th GRADE MATHEMATICS YEAR LONG PACING

Arkansas Mathematics Standards

• indicates standard for instruction each quarter

	Q1	Q2	Q3	Q4
<b>Measurement and Data</b>				
<b>4.MD.A Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit</b>				
<b>4.MD.A.1</b> <ul style="list-style-type: none"> <li>Know relative sizes of measurement units within one system of units including km, m, cm; kg, g; lb, oz.; l, ml; hr, min, sec; yd, ft, in; gal, qt, pt, c</li> <li>Within a single system of measurement, express measurements in the form of a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. <i>For example: Know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), and (3, 36).</i></li> </ul>		•	•	
<b>4.MD.A.2</b> <ul style="list-style-type: none"> <li>Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money including the ability to make change; including problems involving simple <i>fractions</i> or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.</li> <li>Represent measurement quantities using diagrams such as <i>number line diagrams</i> that feature a measurement scale.</li> </ul>	•	•	•	•
<i>Note: 4.MD.A.2 This is a standard that may be addressed throughout the year focusing on different context.</i>				
<b>4.MD.A.3</b> Apply the area and perimeter formulas for rectangles in real world and mathematical problems. <i>For example: Find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.</i>		•	•	
<b>4.MD.B Represent and Interpret Data</b>				
<b>4.MD.B.4</b> <ul style="list-style-type: none"> <li>Make a line plot to display a data set of measurements in fractions of a unit (e.g., 1/2, 1/4, 1/8)</li> <li>Solve problems involving addition and subtraction of fractions by using information presented in line plots <i>For example: From a line plot, find and interpret the difference in length between the longest and shortest specimens in an insect collection.</i></li> </ul>		•	•	
<b>4.MD.C Geometric Measurement: understand concepts of angle and measure angles</b>				
<b>★ 4.MD.C.5</b> Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement: <ul style="list-style-type: none"> <li>An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle</li> <li>An angle that turns through 1/360 of a circle is called a "<i>one-degree angle</i>," and can be used to measure angles</li> <li>An angle that turns through <i>n</i> one-degree angles is said to have an angle measure of <i>n</i> degree .</li> </ul>	•	•	•	•
<i>Note: 4.MD.C.5 Use the degree symbol (e.g., 360°).</i>				
<b>4.MD.C.6</b> <ul style="list-style-type: none"> <li>Measure angles in whole-number degrees using a protractor</li> <li>Sketch angles of specified measure</li> </ul>			•	•
<b>4.MD.C.7</b> <ul style="list-style-type: none"> <li>Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts</li> <li>Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems <i>For example: Use an equation with a symbol for the unknown angle measure.</i></li> </ul>		•	•
