

Sun

cloud

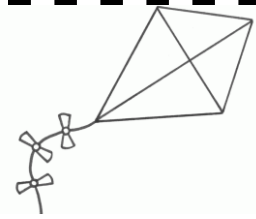

Moon

star

star

kite

Cut out the pictures. Glue from near to far on your page.

Name \_\_\_\_\_

Date \_\_\_\_\_

**Near**

**Far**

Teacher Notes: Students will have ideas about the location of objects in the sky. They may think there are stars between the Earth and the Moon; they may think there is a star within the crescent Moon. They may think the stars and Moon are the same distance. There are no stars between the Earth and Moon; there are no other stars nearer the Earth than the sun. In fact, the Sun is the only star in our Solar System.

Answer Key:

Near

Far
