# Defining Shapes

Rectangle: a shape with 4 sides and 4 corners (angles). Sides opposite each other have the same lengths. All the corners (angles) are the same size.

Square: a shape with 4 sides and 4 corners (angles). All sides are the same length. All the corners (angles) are the same size. A square is a rectangle with 4 equal sides.

Triangle: a shape with 3 sides and 3 corners (angles).

Rhombus: a shape with 4 sides and 4 corners (angles). All sides are equal and the opposite corners are the same.
