## Defining Characteristics

A good essential question:

1. Is *open-ended*; that is, it typically will not have a single, final, and correct answer.
2. Is *thought-provoking* and *intellectually engaging*, often sparking discussion and debate.
3. Calls for *higher-order thinking* such as analysis, inference, evaluation, prediction. It cannot be effectively answered by recall alone.
4. Points toward *important, transferable ideas* within (and sometimes across) disciplines.
5. Raises *additional questions* and sparks further inquiry.
6. Requires *support* and *justification*, not just an answer.
7. *Recur*s over time; that is, the questions can and should be revisited again and again.

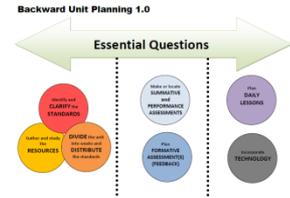

# Mathematical Practices

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

# Essential Questions

**1<sup>st</sup> Quarter** (p. 1 of 2)

**Using Numbers to Represent Quantities; Identifying and Describing Shapes**

Students begin to use numbers (including written numerals) to represent quantities. They begin to count objects in a set and pair each object with one number name. They begin to explore the concept that the number of objects is the same regardless of their arrangement or the order in which they are counted. They also begin to model simple joining and separating situations using objects, fingers, mental images, drawings, sounds, acting out situations and verbal explanations. Students also learn to identify and describe 2-dimensional and 3-dimensional shapes.

**Essential Questions:**

*How does counting help me solve problems?*

*How can I model simple joining and separating situations with sets of objects?*

*What shapes do we see in the world around us?*

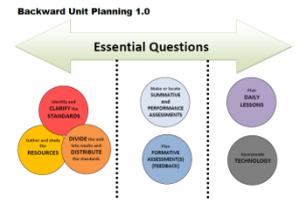

| Counting and Cardinality                         |   |  |

Rogers Public Schools

## Kindergarten Instructional Strategies and Background Knowledge for CCSSM

The Common Core Instructional Strategy documents are a compilation of research, "unpacking" standards from many states, instructional strategies and examples for each standard at each grade level. The intent is to help teachers understand what each standard means in terms of what students should know and be able to do. It provides only a sample of instructional strategies and examples. The goal of every teacher should be to guide students in understanding and making sense of mathematics. Resources used for these documents: Common Core State Standards, Elementary and Middle School Mathematics: Teaching Developmentally by John A. Van De Walle, Department of Education "unpacking" of the standards from Arizona, Ohio and North Carolina.

## R.P.S. Common Core Math Curriculum Kindergarten

**1<sup>st</sup> Quarter** (p. 1 of 2)  
**Using Numbers to Represent Quantities; Identifying and Describing Shapes**  
 Students begin to use numbers (including written numerals) to represent quantities. They begin to count objects in a set and pair each object with one number name. They begin to explore the concept that the number of objects is the same regardless of their arrangement or the order in which they are counted. They also begin to model simple joining and separating situations using objects, fingers, mental images, drawings, sounds, acting out situations and verbal explanations. Students also learn to identify and describe 2-dimensional and 3-dimensional shapes.

| <i>Minimum Quarterly Expectations: Count 1 object.</i>                                       |  |

*Essential Questions:*  
 How does counting help me solve problems?  
 How can I show my thinking when solving story problems?  
 What shapes do I see in the world around me?  
 How can I sort objects?

## R.P.S. Common Core Math Curriculum Overview Kindergarten

**Summary of the Year**  
 In Kindergarten, instructional time should focus on two critical areas:  
 1. Representing, relating, and operating on whole numbers, initially with sets of objects  
 2. Describing shapes and space  
 More learning time in Kindergarten should be devoted to number than to other topics. (CCSS.M.3 + Kindergarten Overview)

**Required Fluency:**  
 K.OA.5. Add and subtract within 5.

**Quarterly Sequence**  
**1<sup>st</sup> Quarter:** Using Numbers to Represent Quantities; Identifying and Describing Shapes  
 Students begin to use numbers (including written numerals) to represent quantities. They begin to count objects in a set and pair each object with one number name. They begin to explore the concept that the number of objects is the same regardless of their arrangement or the order in which they are counted. They also begin to model simple joining and separating situations using objects, fingers, mental images, drawings, sounds, acting out situations and verbal explanations. Students also learn to identify and describe 2-dimensional and 3-dimensional shapes.

**2<sup>nd</sup> Quarter:** Exploring and Representing Quantities; Describing and Comparing Measurable Attributes  
 Students continue to build their understanding of numbers and how they are used to represent quantities and solve problems. They will continue to model simple joining and separating situations using objects, fingers, mental images, drawings, sounds, acting out situations and verbal explanations. Students will explore the numbers 11-19 by representing these numbers with objects or drawings. Students will explore measurable attributes of an object and classify objects based on similarities and differences. They will explore direct comparisons of two objects. Comparison begins with developing the meaning of the word "than" in the context of "taller than," "shorter than," "heavier than," "longer than," etc. This understanding will lead into the more abstract idea of comparing numbers with the terms "more than" and "less than."

**3<sup>rd</sup> Quarter:** Composing and Decomposing Numbers; Deepening Understanding of Addition and Subtraction  
 Students will deepen their understanding of numbers and how they are used to represent quantities and solve problems. They will also deepen their work with simple joining and separating situations and work to strengthen their fluency within 5. Students will build upon their understanding of the numbers 11-19 through composing and decomposing these numbers into ten ones and some further ones, thus developing the idea that the number 10 is special. (It will eventually become the "ten" unit in the place value system in 1<sup>st</sup> grade.)

**4<sup>th</sup> Quarter:** Solidifying Foundational Understandings; Analyzing, Comparing, Creating, and Composing Shapes  
 Students will solidify their understanding of how we use numbers to represent quantities and to model simple joining and separating situations. Students continue to compose and decompose the numbers 11-19 into ten ones and some further ones, gaining a solid foundation for place value. Students will demonstrate fluency of addition and subtraction within 5. Students will also build on their understanding of shapes. They will analyze and compare 2-D and 3-D shapes, create shapes, and discover that shapes can be composed of smaller shapes.

**Kindergarten Major Emphasis Clusters**

**Counting and Cardinality**

- Know number names and count sequence
- Count to tell the number of objects
- Compare numbers

**Operations and Algebraic Thinking**

- Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from

**Number and Operations in Base Ten**

- Work with numbers 11-19 to gain foundations for place value

**K, Counting and Cardinality; K-5, Operations and Algebraic Thinking**

**K-6, Geometry**

**Overview**  
 Like any knowledge of matter, one generalizes from specific examples to a broader understanding. This is especially true for mathematics, where the generalization is often a rule or principle. The goal of this document is to provide a clear and concise overview of the standards for mathematics in kindergarten through grade 6. This document is intended to be used as a resource for teachers, parents, and students alike. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better. The document is organized into sections that correspond to the major emphasis clusters in the standards. Each section provides a brief overview of the standards, followed by a list of specific standards and a description of what they mean. The document is intended to be used as a resource for teachers, parents, and students alike. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better.

**K-5, Number and Operations in Base Ten**

**Overview**  
 The standards for mathematics in kindergarten through grade 5 are organized into four major emphasis clusters: Counting and Cardinality, Operations and Algebraic Thinking, Number and Operations in Base Ten, and Geometry. This document provides a clear and concise overview of the standards for mathematics in kindergarten through grade 5. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better. The document is organized into sections that correspond to the major emphasis clusters in the standards. Each section provides a brief overview of the standards, followed by a list of specific standards and a description of what they mean. The document is intended to be used as a resource for teachers, parents, and students alike. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better.

**K-3, Categorical Data; Grades 2-5, Measurement Data\***

**Overview**  
 The standards for mathematics in kindergarten through grade 5 are organized into four major emphasis clusters: Counting and Cardinality, Operations and Algebraic Thinking, Number and Operations in Base Ten, and Geometry. This document provides a clear and concise overview of the standards for mathematics in kindergarten through grade 5. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better. The document is organized into sections that correspond to the major emphasis clusters in the standards. Each section provides a brief overview of the standards, followed by a list of specific standards and a description of what they mean. The document is intended to be used as a resource for teachers, parents, and students alike. It is not intended to be a substitute for the standards themselves, but rather a guide to help understand them better.

## Counting and Cardinality

### Know number names and the count sequence.

**K.CC.1** Count to 100 by ones and by tens.

*Minimum Quarterly Expectations: Rate count by 1's to 20*

**K.CC.2** Count forward beginning from a given number within the known sequence (instead of having to begin at 1).

**K.CC.3** Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

*Minimum Quarterly Expectations: Write numbers 0-5*

### Count to tell the number of objects

**K.CC.4** Understand the relationship between numbers and quantities; connect counting to cardinality.

a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.

b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.

c. Understand that each successive number name refers to a quantity that is one larger.

**K.CC.5** Count to answer "how many?" questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1-20, count out that many objects.

*Minimum Quarterly Expectations: Count to answer "how many" questions about as many as 5 objects...*

*Pre-K comes in working with numbers to 10.*

Even though we have minimum quarterly expectations, we *don't* have to stay there.

Identify and **CLARIFY** the **STANDARDS**

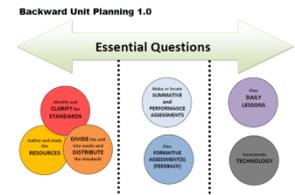

Turn and TALK

**Cardinality** means one-to-one correspondence. All of these standards have an idea of all their own.

**Subitizing** is the ability to recognize a quantity without counting.

**K.CC.4** is when *you give them objects* and they count.

**K.CC.5** is when *you give the students a number* and then they count out those objects.

## Operations and Algebraic Thinking

Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from

|  |  |
|--|--|
| K.OA.1   | Represent addition and subtraction with objects, fingers, mental images, drawings (details not needed), sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.         |
| K.OA.2   | Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.   |
| K.OA.3   | Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by using objects or drawings, and record each decomposition by a drawing or equation (e.g., $5 = 2 + 3$ and $5 = 4 + 1$ ). |
| <i>Minimum Quarterly Expectations: Decompose numbers up to 5 into pairs in more than one way...</i>                      |  |
| K.OA.4   | For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation.                              |
| <i>K.OA.4 is not formally reported until 2nd quarter - conceptual experiences must be provided.</i>                      |  |
| K.OA.5   | Fluently add and subtract within 5.  |
| <i>Fluency is not formally reported until 3rd quarter - conceptual experiences must be provided throughout the year.</i> |  |

**K.OA.1** is understanding the concept behind addition and subtraction. When you add it gets bigger, when you subtract it gets smaller.

**K.OA.2** is the application of K.OA.1 combined with K.CC standards.

**K.OA.3** means decomposing numbers **UP** to 10, **NOT JUST 10** (aka combinations).

**K.OA.4** is the inverse of K.OA.3, now students will find the missing addend (aka separations).

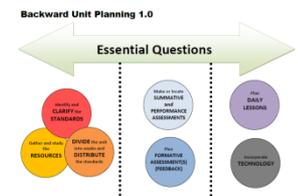

*Just like K.OA.3, you don't have to start with 10. Whatever number you are working with for K.OA.3, you can do with K.OA.4. You can do these simultaneously.*

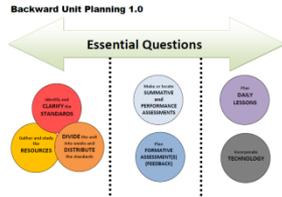

Identify and  
**CLARIFY** the  
**STANDARDS**

**K.OA.3** and **K.OA.4** should work through a progression (like a ramp). Work with smaller numbers and build up to 5. (For example: Start with 3). Use of concrete objects might be easier than beginning with double-sided counters.

**K.OA.5** fluency will happen when students have **multiple experiences** with K.OA.3 and K.OA.4.

Identify and  
**CLARIFY** the  
**STANDARDS**

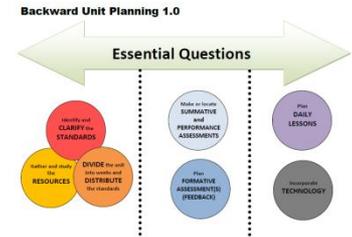

**K.G.1** can be embedded throughout the day. We will purposefully use the terms when we talk with students. (Note: The words above and beside do not translate in Spanish).

| Geometry  |   |
|---|---|
| Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres). |   |
| K.G.1   | Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as <i>above</i> , <i>below</i> , <i>beside</i> , <i>in front of</i> , <i>behind</i> , and <i>next to</i> . |
| K.G.2   | Correctly name shapes regardless of their orientations or overall size.   |
| K.G.3   | Identify shapes as two-dimensional (lying in a plane, "flat") or three three-dimensional ("solid").   |
| Measurement and Data  |   |
| Classify objects and count the number of objects in each category.  |   |
| K.MD.3  | Classify objects into given categories; count the numbers of objects (less than or equal to 10) in each category and sort the categories by count.  |

**K.G.2** and **K.G.3** are foundational to later geometry standards in 4<sup>th</sup> quarter. However, these two particular standards will **not** appear again.  
*We suggest teaching these standards early in the quarter and assess mid-quarter to determine if re-teaching is necessary.*

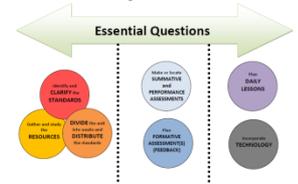

**K.MD.3** is foundational to categorical data in future grades. Students also had experiences with sorting in Pre-K. *This is a nice standard to combine with the geometry standards.*

**DIVIDE** the unit into weeks and **DISTRIBUTE** the standards

During 1<sup>st</sup> Quarter we are going to pose JRU, SRU, and PPW-WU.

## Using Numbers to Represent Quantities; Identifying and Describing Shapes

Students begin to use numbers (including written numerals) to represent quantities. They begin to count objects in a set and pair each object with one number name. They begin to explore the concept that the number of objects is the same regardless of their arrangement or the order in which they are counted. They also begin to model simple joining and separating situations using objects, fingers, mental images, drawings, sounds, acting out situations and verbal explanations. Students also learn to identify and describe 2-dimensional and 3-dimensional shapes.

### Lessons addressing the Unit Standards

Lessons listed below are in no particular order or instructional sequence...the needs of your students will determine your instructional path through this unit.

#### Multi-Day Lessons:

**Let's Count to 5:** In this series of 6 lessons, students make groups of zero through five objects and connect number words to the groups. They use numerals to record the size of a group. Familiar nursery rhymes and songs and visual, auditory, and kinesthetic activities are included in each lesson. (standards addressed: K.CC.4, K.CC.5, K.CC.1, K.CC.2, K.CC.3)

**Learning Patterns:** Provide each student with five counters and a piece of construction paper as a mat. Hold up a dot plate for about 3 seconds. "Make the pattern you saw using the counters on the mat. How many dots did you see? How did you see them?" Spend some time discussing the configuration of the pattern and how many dots. Do this with a few new patterns each day.

### 1st Quarter

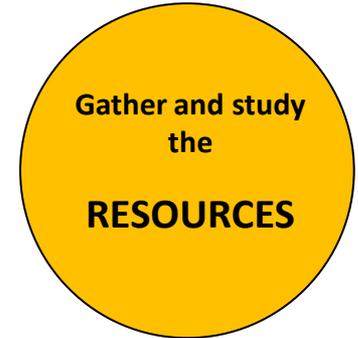

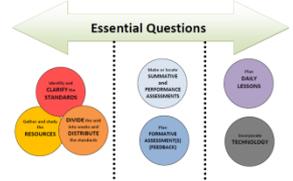

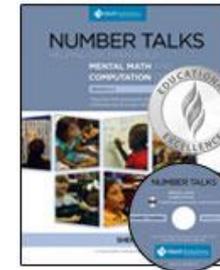

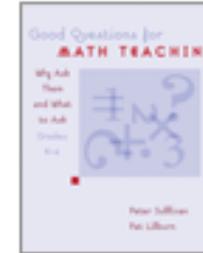

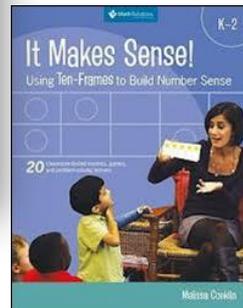

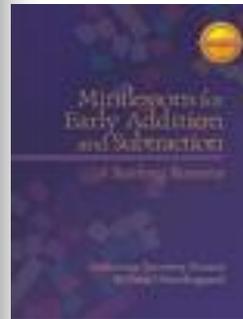

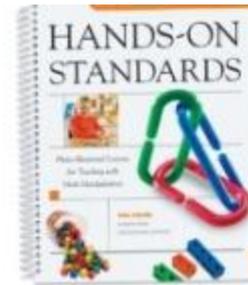

#### Essential Questions

How does counting help me solve problems?

How can I model simple joining and separating situation with sets of objects?

What shapes do we see in the world around us?

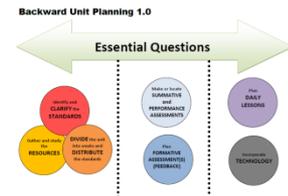

#### Mathematical Practices

**CGI Addition & Subtraction Problem Types**  
\*Adapted from Children's Mathematics Cognitively Guided Instruction by Carpenter, Ferrara, Franke, Levi, Engeson

|                 | Result Unknown   | Change Unknown  | Start Unknown  |
|-----------------|--|---|--|
| Join            | Sarah had 6 crayons. Brad gave her 7 more crayons. How many crayons does Sarah have altogether?                  | Sarah has 6 crayons. How many more crayons does she need to have 13 altogether?                                 | Sarah had some crayons. Brad gave her 7 more crayons. Now she has 13 crayons. How many crayons did Sarah have to start with? |
| Separate        | Sarah had 13 crayons. She gave 6 to Brad. How many crayons does Sarah have left?                                 | Sarah had 13 crayons. She gave some to Brad. Now she has 7 marbles left. How many marbles did she give to Brad? | Sarah had some crayons. She gave 6 to Brad. Now she has 7 crayons left. How many crayons did Sarah have to start with?       |

# E.Q. - How does counting help me solve problems?

The image shows two overlapping report cards for Kindergarten Math, specifically for the Counting and Cardinality domain. The top card is titled "Knows number names and the counting sequence" and includes the following sections:

| Report Card Descriptor  | Knows number names and the counting sequence   |  |   |   |
|-------------------------|--|--|---|---|
| Standard To Be Measured | K.CC.1 Count to 100 by ones and by tens.<br>K.CC.2 Count forward beginning from a given number within the known sequence (instead of having to begin at 1) |  |   |   |
| Quarterly Expectation   | <b>1st Quarter</b><br>Rote count by 1's to 20  | <b>2nd Quarter</b><br>Rote count by 1's and 10's to 50 | <b>3rd Quarter</b><br>Rote count by 1's to 75; by 10's to 100 | <b>4th Quarter</b><br>Rote count by 1's and 10's to 100 |
| Student                 |  |  |   |   |

The bottom card is titled "number of objects with a written numeral (0-20)" and includes the following sections:

| Standard To Be Measured | number of objects with a written numeral (0-20) |   |   |  |
|-------------------------|---|---|---|--|
| Quarterly Expectation   | Write numbers to 10                             | <b>3rd Quarter</b><br>Write numbers to 15 | <b>4th Quarter</b><br>Write numbers to 20 |  |
| Student                 |   |   |   |  |

We decided we would conference with students during counting collections in order to assess our K.CC standards.

# How can I show my thinking when solving story problems?

## CGI Student Strategy Recording Form Single Digit Addition & Subtraction

Problem Type: \_\_\_\_\_  
CGI Story:

Number Sets:

| Non-Valid | Direct Modeling   | Counting  | Derived Facts and/or Recalled Facts   | Flexible Strategies<br><small>(can be evident in any of the previous three stages)</small> |
|-----------|---|---|---|--|
|           | -Represents all quantities<br>-Follows action or situation of story | -Conserves one number is his/her head<br>-Counts on or back by ONES | -Uses an addition/subtraction fact they know to solve one they don't know (derived fact)<br>-Knows an addition/subtraction fact from memory (recalled fact) | -Strategy does not match the action or situation of the problem                            |
|           |   |   |   |  |

Kindergarten – 1st Quarter Using Numbers to Represent Quantities; Identifying and Describing Shapes

For this assessment, numbers were chosen within 10 to score to the standard. During this first quarter please feel free to use numbers higher than 10 based on your formative assessment data.

\*This standard states "addition and subtraction word problems" and in the appendix it is hoped that Kindergarteners would be able to solve a variety of addition/subtraction problem types with the unknown in all positions. However, for the beginning of the year, we realize you may begin with only these three problem types. Please feel free to include other problem types based on the needs of your students.

JRU (Join Result Unknown) CCSS – Add to Result Unknown

\_\_\_\_\_ has \_\_\_\_\_ cookies. \_\_\_\_\_ gives her \_\_\_\_\_ more cookies. How many cookies does \_\_\_\_\_ have now?

(2, 2) (2, 3) (3, 3)

SRU (Separate Result Unknown) CCSS – Take From Result Unknown

\_\_\_\_\_ has \_\_\_\_\_ crackers. She eats \_\_\_\_\_ crackers. How many crackers does \_\_\_\_\_ have left?

(3, 1) (3, 2) (6, 3)

(Pre-assessment for 2<sup>nd</sup> quarter)

PPW-WU (Part Part Whole – Whole Unknown) CCSS – Put together Total Unknown

There are 4 boys and 6 girls playing on the playground. How many kids are playing in all?

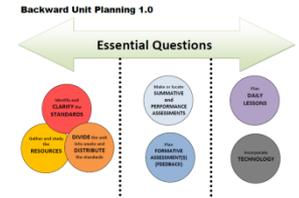

For formative assessment purposes we would use our strategy sheets, and for a summative assessment we would use the assessment provided.

**Formative Assessment** is used during the learning process. It's purpose is to inform the teacher and the students how well the learning is going.

- Anne R. Reeves

# Examples:

| Report Card Descriptor  | Relates addition and subtraction   |             |             |             |
|-------------------------|--|-------------|-------------|-------------|
| Standard To Be Measured | 1.OA.3. Apply properties of operations as strategies to add and subtract. [Students need not use formal terms for these properties.]<br>Examples: $7 + 3 = 10$ is known, then $3 + 8 = 11$ is also known. [Commutative property of addition.] To add $2 + 6 = 4$ , the second two numbers can be added to make a ten, so $2 + 6 = 2 + 2 + 10 = 12$ . [Associative property of addition.] |             |             |             |
| Quarterly Expectation   | 1st Quarter  | 2nd Quarter | 3rd Quarter | 4th Quarter |
| Student                 |  |             |             |             |

Problem: \_\_\_\_\_ Date: \_\_\_\_\_

### Continuum of Solution Strategies for Multi-Digit Addition

| Addition Strategy Level  | Specific Strategy Within Each Level | Students who are using that strategy |

### Purposeful Pedagogy and the High Yield Strategies in Math

| Lesson Component  | Opportunities for Student Use of the High Yield Strategies   |
|---|--|
| <b>Launch</b> <ul style="list-style-type: none"> <li>- Set the stage (APK) and pose the problem to students</li> <li>- Provide time for students to mentally think about their solution strategies/plan or talk about how they plan to solve it</li> </ul>  | <ul style="list-style-type: none"> <li>• Cues, Questions, and Advanced Organizers</li> <li>• Setting Objectives and Providing Feedback (if a goal was established before the lesson or students rated themselves before solving the problem)</li> <li>• Nonlinguistic Representations (if a picture was used as an APK or part of the problem launch)</li> <li>• Cooperative Learning (if students engaged in discussion or sharing about what they know/don't know about the problem)</li> </ul>  |
| <b>Students Independently Work</b><br>(Explore) <ul style="list-style-type: none"> <li>- Students work to solve the problem – applying previous learning &amp; understanding from past classroom discussions or working to gain new learning in their solution process</li> <li>- Teachers confer with students as they work – listen to and notice student strategies or their misconceptions while working (this will guide future instruction)</li> <li>- Teachers select strategies to share in the discussion that will lead to the content goal for the standard(s) selected</li> </ul> | <ul style="list-style-type: none"> <li>• Reinforcing Effort and Providing Recognition (thru teacher/student conferences)</li> <li>• Summarizing and Note Taking (students are recording their thinking)</li> <li>• Nonlinguistic Representations (students recording their thinking)</li> <li>• Homework and Practice (students are applying previously learned strategies, trying new strategies, etc.)</li> <li>• Generating and Testing Hypothesis (students generate a plan for solution, then work to solve the problem and test their plan)</li> <li>• Cooperative Learning (if students work together in partners or small groups to solve the problem or work on strategies to solve the problem)</li> <li>• Setting Objectives and Providing Feedback (thru teacher/student conferences)</li> <li>• Cues, Questions, and Advanced Organizers</li> </ul>   |
| <b>Discussion</b><br>(Summarize) <ul style="list-style-type: none"> <li>- Teacher facilitates discussion of new learning by comparing strategies, looking at the mathematical understanding, notation, misconceptions, etc.</li> <li>- Students analyze other students' strategies, compare them to those selected for the discussion and to their strategy</li> <li>- Content goal/understanding is presented through the discussion</li> <li>- May end with a True/False Question or Open Number Sentence with a new set of numbers for student application of new learning</li> </ul>      | <ul style="list-style-type: none"> <li>• Identifying Similarities and Differences (students are comparing and analyzing strategies)</li> <li>• Reinforcing Effort and Providing Recognition</li> <li>• Summarizing and Note Taking (students are summarizing what they "hear" their classmates sharing or doing mathematically)</li> <li>• Nonlinguistic Representations (students solutions posted during the discussion for comparison and analysis)</li> <li>• Cues, Questions, and Advanced Organizers</li> <li>• Cooperative Learning</li> <li>• Setting Objectives and Providing Feedback (Content goal/understanding should develop thru the discussion (if a goal was established before the lesson or students rated themselves before solving the problem – generalization of that goal and their understanding would take place)</li> <li>• Homework and Practice (if a new set of numbers is used through a new problem, true/false question or open number sentence, students are applying previously learned strategies, trying new strategies, etc.)</li> <li>• Generating and Testing Hypothesis (generate hypothesis about strategies then test how or if they work in various situations)</li> </ul> |

Assessment is continuous throughout the lesson...

GANAG is a daily lesson structure that allows teachers to plan for student use of research based instructional strategies.

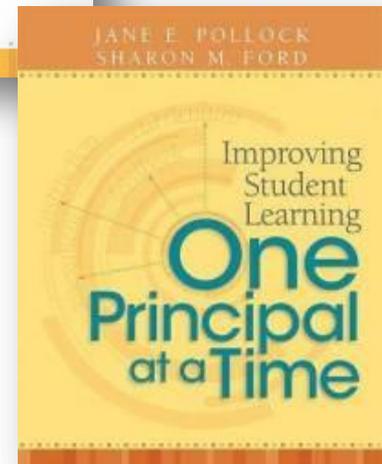

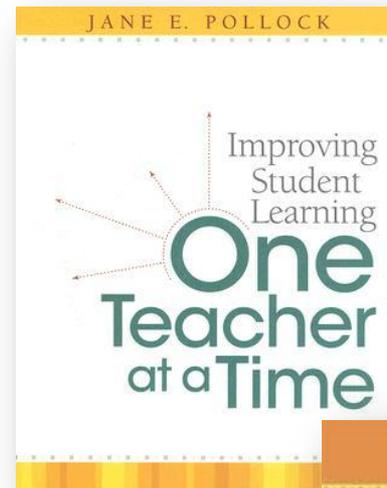

**G**= goal

**A**= access prior knowledge

**N**= new information

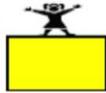

**A**= application

**G**= generalize the goal

# Daily Lesson Plans

Georgia Department of Education  
Common Core Georgia Performance Standards Framework  
Kindergarten Mathematics • Unit 3

**PRACTICE TASK: Shape Sort**  
Approximately 2-3 days (adapted from Van de Walle 7.1 & 7.2)

**STANDARDS FOR MATHEMATICAL CONTENT**

**MCCK.G.1** Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as *above*, *below*, *beside*, *in front of*, *behind*, and *next to*.

**MCCK.G.2** Correctly name shapes regardless of their orientations or overall size.

**MCCK.G.3** Identify shapes as two-dimensional (lying in a plane, “flat”) or three-dimensional (“solid”).

**MCCK.MD.3** Classify objects into given categories; count the numbers of objects in each category and sort the categories by count

**STANDARDS FOR MATHEMATICAL PRACTICE**

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate units and labels.
6. Attend to precision.

# Counting Collections

Isabella has lined up paintbrushes across a table and is rolling them one by one to the side. Tyler and Aaron are wrapping pencils into bundles. Maya is organizing toy kangaroos, and her partner, Max, is drawing a picture of how she is doing it. What is going on in this classroom?

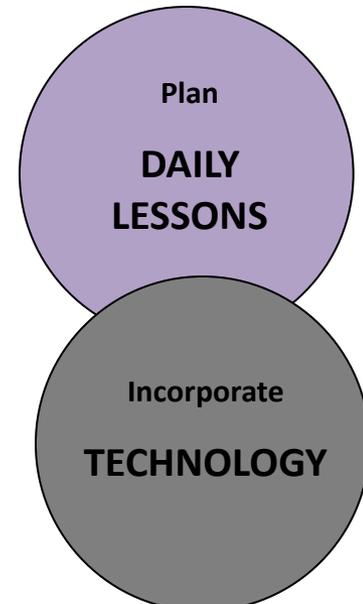

**Why Count Collections?**

At the beginning of every school year, the five- to seven-year-olds at Cortane A. Seeds University Elementary School (UES) spend several weeks “counting collections.” UES, the laboratory school of the Graduate School of Education and Information Studies at UCLA, serves a socioeconomically and ethnically diverse student population from urban and suburban Los Angeles. The classes are multiage, and the five- to seven-year-old classes include children who would be considered kindergarten and first-grade students.

Our work in counting collections was inspired by Megan Franke, a parent at our school and a researcher in mathematics education and children’s thinking who has often worked in our classrooms. Megan encouraged us to try counting collections

of objects with our young children, believing this would provide children with rich opportunities to practice oral counting, develop efficient counting strategies, group objects in strategic ways, record numbers, and represent their thinking. Research shows that although counting is one of the best ways we know to help children develop number sense and other important mathematical ideas, we do not do nearly enough of it in elementary schools. Children need lots of experience with counting to learn which number comes next, how this number sequence is related to the objects in front of them, and how to keep track of which ones have been counted and which still need to be counted (Fuson 1988). Experience with counting provides a solid foundation for future experience with addition, subtraction, multiplication, and division (National Research Council 2003).

Convinced by the literature as well as the outcomes we have seen with our students, we have made counting collections a fundamental part of what we do with young children at UES beginning the first week of school each fall. We hope this article will provide a window on the process of counting collections in our classrooms as well as evidence that every child in our classrooms can hold his or her

## Launch

- APK – Picture of baseball practice – What are they doing?
- Pose the problem – turn and talk about your strategy to solve

## Students Independently Work

- Students work to solve the problem
- Teacher listens, notices and confers
- Teacher selects strategies to share

## Discussion

- Compare and analyze strategies, mathematical understanding, notation, misconceptions, etc.
- How did they recognize “odd and even numbers”?
- Did they discover that certain numbers wouldn’t give them “even number” of groups?

Kindergarten Addition and Subtraction Problem Types UNIT 1

**Standards addressed by these problems:** K.OA.2, K.OA.1, K.OA.3, K.OA.4, K.OA.5, K.OA.6, K.OA.7, K.OA.8, K.OA.9, K.OA.10

**Teacher note:** To address the standard K.OA.1 you will need to increase your numbers so the sum will equal up to 100.

**Overall purpose of these problem types:** Students will use their understanding of counting and cardinality, operations, and algebraic reasoning (commutative property, associative property) to solve addition/subtraction problems with numbers within 10. You can extend the counting sequence up to 100 at the same time by changing your numbers to values up to 100. Possible problems that can be used to address are IRU, IJU, SRU, SCU, PPA-WU, and PPA-PU.

**NOTE:** Any of these problems can be used as a pretest (or an ongoing assessment) of students’ understanding.

**IRU (Join-Result Unknown):**  
Travis has \_\_\_ rings. Her sister, Carl, gives her \_\_\_ more rings. How many rings does Travis have now?  
(4, 4) (4, 2)

**IJU (Join-Change Unknown)**  
Matthew has \_\_\_ toy dinosaurs. He bought some more toy dinosaurs at Wal-Mart. Now, Matthew has \_\_\_ toy dinosaurs. How many toy dinosaurs did Matthew buy at Wal-Mart?  
(2, 4) (3, 10)

**SRU (Separate-Result Unknown)**  
Elliot had \_\_\_ tokens at Choo-Ch-ese. He used \_\_\_ of his tokens to play games. How many tokens does Elliot have left?  
(10, 2) (10, 3)

**SCU (Separate-Change Unknown)**  
Ceren had \_\_\_ marbles. He lost some of his marbles at recess. Now, Ceren has \_\_\_ marbles left. How many marbles did Ceren lose at recess?  
(8, 4) (8, 3)

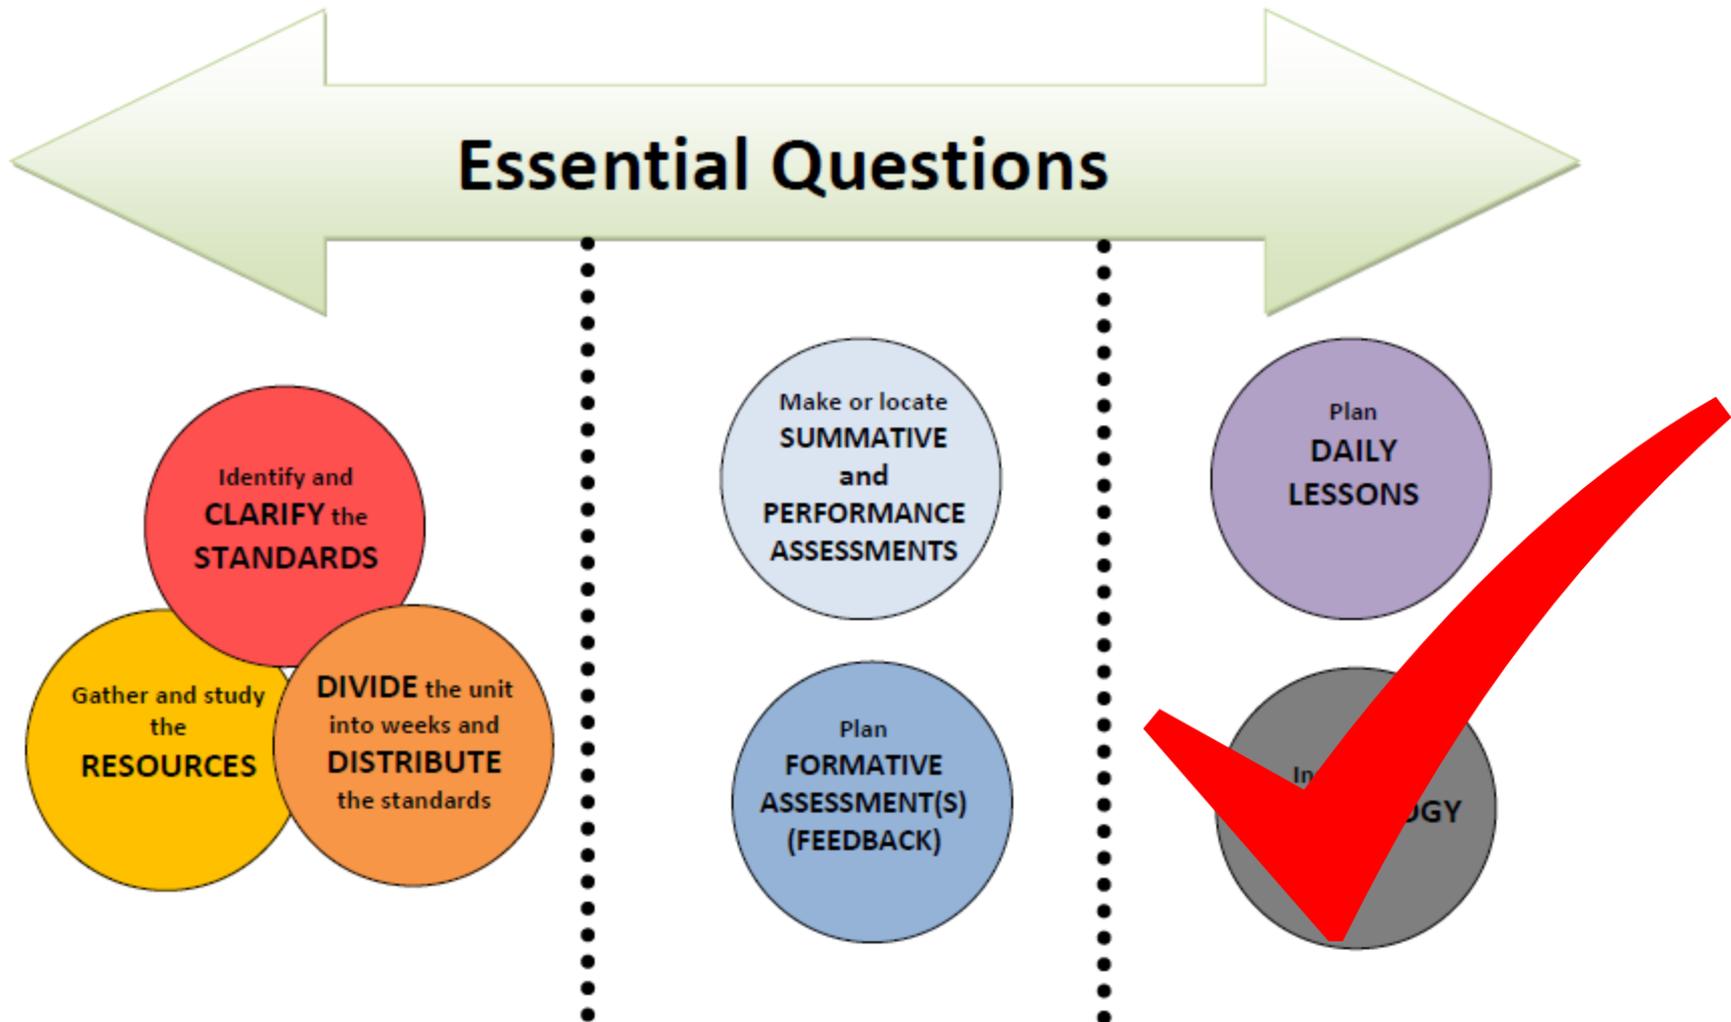

**PPA-WU (Part-Part-Whole, Whole Unknown)**  
There were \_\_\_ sugar cookies and \_\_\_ peanut butter cookies on a plate. How many cookies were there altogether?  
(3, 3) (4, 3)

**PPA-PU (Part-Part-Whole, Part Unknown)**  
In Miss Meely’s preschool class there were \_\_\_ kids in her classroom. \_\_\_ of the kids were three years old and the rest were four years old. How many of the kids in Miss Meely’s class were four years old?  
(10, 6) (7, 2)

## Online Resource –

Problem Solving Resources:  
“Addition and Subtraction Problem Types”

# Backward Unit Planning 1.0

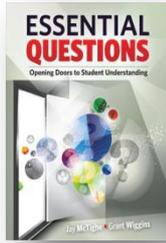

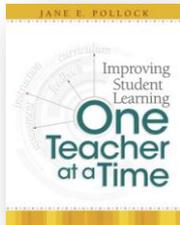

## Essential Questions

- 1. How does counting help me solve problems?***
- 2. How can I show my thinking when solving story problems?***
- 3. What shapes do I see in the world around me?***
- 4. How can I sort these objects?***
