Planning a Math Lesson Using Webpage Resources

This document guides a teacher to use the complete curriculum, including all the resources provided to help teachers be successful. All of the documents were created using the **Math Common Core State Standards.**

Guiding Icon	Steps for Lesson Planning	Document/Resource
	1. Begin with the ***Year at a Glance*** and ***Math Curriculum Overview*** documents. These will provide an overview of your year and each quarter.		2. Find the Quarterly ***Instructional Pacing Guide*** *of the Common Core State Standards.* This document presents an overview of the quarter/unit, essential questions, and the standards for student engagement within the unit.	
	3. Locate the ***Quarterly Unit*** from the **Curricular and Instructional Resources** are of your grade level webpage. This page provides lessons, resources, problem solving, games, activities, etc. that align to the standards in the unit.	
	4. Read the ***Instructional Strategies & Background Knowledge*** documents for the standards in the unit. These provide great depth and understanding behind the standard, instructional strategies, interventions, and help clarify questions or misconceptions that may arise with the standards or in student work.		5. Create a weekly sequence of instruction by standard. Map out how many weeks you have in the unit, and begin to structure how you would teach the standards – pacing them throughout the unit. Locate lessons, resources, or problems to pose from the ***online unit*** to match the standard pacing and sequence you created. Select from multi-day lessons, single day lessons, games, activities, etc. to align to your instructional pacing, schedule, and the needs of your students.	 The ***Instructional Sequence and Planning Document*** is sample that is available online to assist you in this process if you do not already have a planning document.
	6. Locate the ***Scoring Guide*** for your grade level. These provide a means for scoring your students' performance of the standards and providing feedback based on the standards.	
Sample Lessons are linked next to the camera icon.
These allow you to glimpse inside classrooms to see actual lessons.
